

Validation

An example of the Validation pack that ATC would propose to supply includes:

1

Print

2

Inspection print

3

Sample inspection detail sheet

4

Statistical Process Control (SPC) sheet for all features.

ATC operate Statistical Process Control (SPC) wherever applicable to ensure that the process is controlled and continues to be in control. As a base line we work to Six Sigma.

5

Materials contact sheet

6

Relevant Installation Protocol (IP), Operational Protocol (OP) & Process Protocol (PP) information as required

7

Review sheet based on first run, highlighting any specific issues found which should be raised and discussed.

This will include inspection of known wrong components to ensure that the system picks them up.

8

Any other necessary tests according to design requirements

(includes hardness & finishing testing, material testing and any product specific testing)
